## What do SOME NGIs need to do?

*Tuesday, 2 March 2010 15:30 (45 minutes)*

The move from a central to a national structures means that SOME NGIs need to participate actively in some activities:

- \* Middleware Rollout. Sites are needed to put releases of new software services into a production use for communities to verify their ability to operate at production loads. (O-E-9)
- \* Interoperation. Some new software releases will change the public interfaces used by other middlewares deployed within EGI or by our international partners. We need sites willing and able to put new releases into production and verify that interoperability remains. (O-E-11)

**Presenter:** DAVID, Mario

**Session Classification:** Moving to NGI Operations
