Dealing with different middleware

Tuesday, 2 March 2010 16:15 (30 minutes)

EGI will work to define middleware interfaces that need to be supported in production as opposed to naming specific middleware instances. Operationally, particular middleware distributions will need to be integrated into production. This will have an impact on:
* Integration into monitoring tools
* Accounting of resource usage into national/central accounting databases
* Deployment, interoperation and support.

Presenters: PAPASPYROU, Alexander;   GORDON, John
