

EMI and Open Standards: A Brief History of the Future

Tuesday, 18 September 2012 12:00 (15 minutes)

Description of the work

TBD

Wider impact of this work

TBD

Printable Summary

EMI is one of the drivers of the Open Grid Forum (OGF) by providing numerous inputs into ongoing specification work and by chairing actively several working groups. While several concrete specification proposals have been given into OGF (e.g. Compute Accounting Record, Storage Accounting Record, or EMI Execution Services), the standardization of these specifications is work-in-progress. Also work on OASIS SAML and XACML profiles will be shown in this presentation. The relationships of the EMI activities to OGF activities and future outcomes will be presented.

Primary author: Mr RIEDEL, MORRIS (JUELICH SUPERCOMPUTING CENTRE)

Co-authors: KERR NILSEN, Jon (UIO); FUHRMANN, Patrick (DESY); MEMON, Shahbaz (JUELICH); SHIRAZ MEMON, ahmed (JUELICH)

Presenter: Mr RIEDEL, MORRIS (JUELICH SUPERCOMPUTING CENTRE)

Session Classification: New middleware products

Track Classification: Resource Infrastructure services (Peter Solagna: track leader)
