

# IGE Information System Update

Tilo Eißler, Ilya Saverchenko  
LRZ

- Globus Integrated Information Services (IIS)
  - Information system for distributed infrastructures
  - Building blocks: capability schema, REST, XML, etc.
- Integration in EGI requires implementation of new features
  - Limited value outside of the EGI infrastructure
- Assess BDII as the information system for Globus in EGI

- **Goal:** make static and dynamic GridFTP and GRAM5 information available using BDII
- What is available as **base**?
  - GLUE 2.0 schema (mandatory fields)
  - EMI BDII information provider for CREAM-CE (glite-info-glue2-endpoint, glite-ce-glue2-share-static, ...)
  - GRAM5 GLUE 2.0 info providers from David Groep

- **Next steps:**
  - contribute to GRAM5 information provider development
  - develop GridFTP information provider based on existing GLUE 2.0 examples
- Open Questions: What is the release procedure?  
As a part of EMI or a separate IGE package?
