

# Massive Open Online Course Development

*Tuesday, 9 April 2013 16:40 (20 minutes)*

## Summary

The project aims to provide open online courses for the education of students and researchers on e-infrastructures and particularly on the European Grid Infrastructure. Recent developments in 'Massive Open Online Courses' (MOOC) platforms enforced the massive distribution of educational content to worldwide audiences. The project envisions contributing to the circulation of free knowledge with the creation of a MOOC on the following topics: EGI Grid, Cloud (Federated) and Hadoop. The content will be available to both current EGI participants and potential new users via an online MOOC platform. As part of this project material on these topics will be constructed in a way that increases visibility of available EGI services.
