VOMS support, MyProxy Tool, and Globus Online Tool in GSISSH-Term

Monday, 16 September 2013 16:05 (20 minutes)

GSISSH-Term is a Java-based terminal client for GSISSH/SSH interactive
access. It is a one click install and launch client (Java
WebStart) with many tools included, like VO Management Tool,
MyProxy Tool, and Globus Online Tool, to make using the Grid,
particularly EGI, a breeze. This customised and improved version of GSISSH-Term
is a branchout from the NGS-maintained version.

Presenter: HOON LEONG, Siew (EGI.EU)

Session Classification: Services and platforms for VREs
