

EGI's support services for the Science Gateways community

Tuesday, 17 September 2013 17:00 (20 minutes)

Science gateways (SGs) are an emerging interface for communities to engage more actively with the European Grid Infrastructure. The complexity of accessing distributed resources is hidden from researchers, and therefore several communities are building customized gateways for their members.

The presentation will provide an overview of the support provided by EGI to the SG community, both users and technology providers. The experiences of reaching new communities will also be highlighted.
