

CloudWatchHUB Cloud standards profile workshop

Tuesday, 17 September 2013 16:00 (10 minutes)

Description of Work

This first workshop is dedicated to a first material collection effort. Speakers are invited to present real-world cases that are not supported by existing Cloud standards. Where available, strawman or proof-of-concept extensions and profiles to existing Cloud standards should be included in these presentations.

The goal of this specific workshop is to identify a first set of use cases that require profiling, together with candidate Standards Development Organisations that may host a relevant working group.

Wider Impact of this Work

This work has been identified as part of Action 1 of the European Cloud Strategy, “Cutting through the Jungle of Standards”

Session, double-session

One session

Printable Summary

The CloudWatchHUB Cloud standards profile workshop is the first of six in a series of workshops held by the newly formed CloudWatchHUB projet. These workshops are geared towards gathering material for further Cloud standards profiling and extensions.

Where sufficient material is already available, these workshops will be conducted as focused sessions towards actual profile document development work instead of (but not exclusive to) material gathering.

Primary author: DRESCHER, Michel (EGLEU)
