

Environmental science on grids and clouds

Tuesday, 20 May 2014 11:00 (15 minutes)

This workshop aims to bring together those members of EGI who work with environmental science research communities to exchange experiences on existing services, requirements and trends concerning the use of EGI grid and cloud solutions within this domain. On one hand the workshop acts as a container for environmental science-related oral presentations that are submitted to the forum. On the other hand it will include invited presentations from the community (NGIs, related projects). If time permits a panel or a structured discussion will be also included.

Wider impact and conclusions
