## **NGI\_IBERGRID experiences with regional tool**

*Monday, 11 April 2011 16:30 (30 minutes)*

### **Overview**

NGI\_IBERGRID is the EGI operations representative for the Spanish and Portuguese NGIs integrating under the same operation body all Iberian resources. It follows an operation model where the majority of the EGI national tasks are shared between the two countries, and where the ROD work is no exception. In this presentation we will describe the NGI\_IBERGRID ROD operation model which special emphasis on the operation of the regional tools, like the dashboard and nagios, on operational protocols on handling alarms originated from regional sites, and on how regional operation procedures are followed to be compliant with EGI operation guidelines.

**Presenter:** BORGES, Goncalo

**Session Classification:** EGI
