South East European Regional and National e-Infrastructure Programs

Monday, 11 April 2011 09:00 (8 hours)

Impact

SEERA-EI will create a harmonized approach to national level initiatives in eInfrastructure in SEE, ensure national level commitment, and will pave the way towards a common regional vision, strategy and sustainable cooperation which will give the region a common voice on European and international stage.

Description of the work

The SEERA-EI builds on the lasting cooperation in the SEE region, embodied in a number of eInfrastructure EC-funded initiatives with the aim to ensure equal participation of the scientific user communities of the region in the European networking and computing trends.

Conclusions

We will present the current status of the eInfrastructure and eInfrastructure programs in the SEE region, best practices and plans.

Overview

The initiative SEERA-EI (South East European Research Area for eInfrastructures) provides an open forum for national-level program owners in order to enable the coordination of national programmes in the field of electronic infrastructures. The initiative brings together 19 partners from 10 countries in the South East European region and will set the framework for the adoption of a common regional agenda for eInfrastructures.
