

## Perun - identity and access management system

*Thursday, 25 September 2014 16:40 (20 minutes)*

In this presentation we will introduce identity and access management system called Perun. The system provides functionality which covers management of the whole user life cycle in nowadays e-Infrastructures, from user enrolment into the e-Infrastructure to user expiration. Perun system supports management of virtual organizations, rights delegation, group management and enrolment management for making flexible user management. In compare to ordinary identity management systems Perun also provides service and access management. Perun is complex tool which eases management of research communities or users and services within the organizations. Perun system is used in production on national (e.g. Czech NGI) and international level (e.g. accesses to the EGI fedcloud resources are managed by Perun).
