ELIXIR compute platform

Wednesday, 20 May 2015 14:40 (20 minutes)

'The ELIXIR Compute Platform brings together the work over the last year of the AAI, Storage and Cloud Task Forces in ELIXIR to define an environment to support leading life-science activities across a distributed infrastructure. These technical activities, encapsulated through a number of technical use cases are driven by four scientific use cases selected by ELIXIR. The presentation will identify the various technical use cases and discuss the results of a recent workshop with European e-Infrastructure and other service providers around how these technical use cases could be realised.

Presenter: NEWHOUSE, Steven (EMBL)

Session Classification: Cloud PaaS - all user communities meeting (http://go.egi.eu/paas)
