

”The EGI virtual appliance library: Application Database”

Friday, 22 May 2015 11:40 (20 minutes)

The EGI Applications Database (AppDB) is a central service that stores and provides to the public, information about:

- software solutions in the form of native software products and virtual or software appliances.
- the programmers and the scientists who are involved, and
- publications derived from the registered solutions

The aim of this presentation is to highlight the EGI Applications Database main capabilities, with regards to the software & virtual appliances registration, management and the distribution, as well as the on-going work about reference scientific datasets.

Presenter: CHATZIANGELOU, Marios (IASA)

Session Classification: Distributed platforms for e-Learning: How can educators and scholars benefit from the Open Science Commons?
