

Roadmap for incoherent scatter radar operations

Monday, 18 May 2015 15:50 (20 minutes)

The reason that the radar facilities exist in the first place is to provide scientists with the means to perform observations and experiments as part of a wide range of research activities. Six areas of collaborative efforts have been identified and these are: Data levels; Access; Standard operations; Non-standard operations; Training and education; and Outreach. We will present the main trends within these and how we will benefit of the work to be done within the EGI EISCAT_3D Competence Centre to solve the scientific needs identified by the roadmap.

Presenter: HAGGSTROM, Ingemar (EISCAT Scientific Association)

Session Classification: Research Infrastructures roadmaps and Competence Centres
