(Open) Data policies and use cases in structural biology

Thursday, 21 May 2015 11:37 (18 minutes)

In my talk I will present which and how data are typically shared in structural biology, describing typical use cases for NMR in particular. I will also review our efforts to define and implement an (open) data management plan in the context of our NMR laboratory, which is part of an European distributed infrastructure providing access to a variety of structural experimental methods (H2020 iNext project).
