- COMCOT (Cornell Multi-grid Coupled Tsunami Model) is a tsunami modeling package, capable of simulating the entire lifespan of a tsunami, from its generation, propagation and runup/rundown in coastal regions.

Performance Improvement

- **Goal**
 - Optimize COMCOT performance and improve the cons of COMCOT
- **Optimization method**
 - Make memory access consecutive
 - Avoid breaking instruction pipelining
 - Logic simplification
 - Avoid expensive operations
 - Reduce memory allocation

User Interface

- Only need to input parameters for
 - Focal Mechanism
 - Nested Grid
 - Tide station
- No need to upload bathymetry data
 - GEBCO global data
 - Resolution: 0.5 minutes
