

URT Meeting April 13, 2015 - Minutes

Agenda: <https://wiki.egi.eu/wiki/URT:Agenda-13-04-2015>

[Participants](#)

[Apologies](#)

[News](#)

[UMD releases status \(Joao\)](#)

[Updates from the product teams](#)

[Actions](#)

[AOB](#)

Participants

Andrea Manzi (WLCG MW Officer)

Bartek Bosak (PSNG/QCG)

Joao Pina (SA1/SA2)

Linda Cornwall (STFC)

Mischa Sallé (Nikhef)

Christian Bernardt (dCache)

Zdenek Sustr (CESNET)

Vincenzo Spinoso (INFN/EGI.eu)

Malgorzata Krakowian (EGI.eu)

Mattias Ellert (Globus)

News

MalgorzataK: UA (Underpinning Agreement):

<https://documents.egi.eu/public/ShowDocument?docid=2282>

is a lightweight document which clarifies reciprocal expectations between EGI and Providers about services, and about responsibilities. We kindly ask for input from TPs for this agreement, if something is unclear or missing. The plan is to agree this document with each Provider. Another document is the Wiki page:

https://wiki.egi.eu/wiki/EGI_Software_Component_Delivery

where we put instructions on how a component is delivered. This will be useful for new providers, we need TPs to review this document as well.

There is no pressure in terms of time for reviewing them.

AndreaM: at CERN we can help with that for both.

UMD releases status (Joao)

- From the SR point of view. We are experiencing problems with the SR and for Verification because of the high number of components in UMD; if lots of products come at the same time, there can be delays.
- Not many products in the queue, some in Verification: new CREAM, Argus patch, dCache 2.10.24. CREAM for SL5 is still under investigation.
- **AndreaM**: when are you releasing?
 - **Vincenzo**: we will plan this in this week. Before the update, we will be sure dCache sites are aware of the major upgrade in the update.
- **Vincenzo**: do we usually clean up tickets like the one for dCache 2.10.20?
 - **Joao**: yes we do.
- **Bartek**: when is the next UMD release scheduled?
 - **Vincenzo**: end of May
 - **Joao**: there is conflict with activities of preparation of the EGI Conf. It would be great to postpone even if one week.
 - **Vincenzo**: this deserves some discussion with Peter and Cristina.

Updates from the product teams

- AndreaM: in WLCG context verified dCache 2.10.24, the same version of UMD. Also ARC-CE under verification.
- Bartek: adding GPU support and VO support for next UMD release.
- Christian: NTR
- Linda: If there is a vulnerability in the software that we use in EGI, even if as a dependency, we could ask the URT list if anybody knows of any usage of this. Recently we had a serious vulnerability in Cassandra, and Perfsonar, which is used in EGI context, depends on Cassandra; we may want to ask on the URT list in such cases as well.
 - Vincenzo: OK with us.
- Mattias: several updates in Globus, none is a major one.
- Mischa: NTR
- Zdenek: nothing new to report, will update the service card asap (apologies).

Actions

- CentOS7 support: no comments from TPs.
- Vincenzo will follow up to <https://wiki.egi.eu/wiki/URT:Java7> to understand which PT have still to fill the information about Java, contacting them directly → ONGOING

AOB

Next meeting **27 Apr. 2015, 15:00 CEST**
