

Discussion - Security Groups progress and plans in the changing EGI environment.

Tuesday, 10 November 2015 12:20 (10 minutes)

As most are aware, the EGI infrastructure and various activities related to it are changing quite rapidly with new communities being engaged with EGI and new technology being used such as that related to the EGI Federated Cloud. These have a wide range of implications concerning the various security activities and evolving the security activities to meet with these challenges is being carried out as part of the EGI-Engage project. This session will include presentations from the Security Policy Group (SPG), the Computer Security Incident Response Team (CSIRT), Software Vulnerability Group (SVG) on progress during the first year of the EGI-Engage project and plans for the future with emphasis on the impact and responsibilities of user and application communities in the changing environment.

Additional information

This is a request for one 90 minute session for the security groups.
