

Accounting Portal demonstration

Monday, 9 November 2015 17:00 (10 minutes)

- The demo will replicate the default view with new graphs and dynamic table (with sortable columns and spreadsheet-like interface). The data is loaded as JSON dynamically instead of only when the page loads. The grouping variables, the VOs and the timeframe can be changed and the data is represented correctly. The graphs are zoomable and if users point to an element, additional information is shown.

Presenter: ALVAREZ, Ivan (CESGA)

Session Classification: e-Infrastructure commons meeting
