

# URT Meeting Jan 11, 2016 - Minutes

## Participants

Vincenzo Spinoso  
Christian Bernardt  
Jon Kerr Nielsen  
Joao Pina  
Andrea Manzi  
Mattias Ellert  
Zdenek Sustr

## Apologies

Tomasz Piontek (QCG)

## Minutes

- Andrea: any plan to integrate the clients in UMD4? I.e. GAFL clients.
  - Vincenzo: this is somehow planned together with the WN/UI part. I'll ping Cristina about that. GFAL can be integrated.
- Christian: in UMD4 it makes more sense to have the 2.13 of dCache instead of the 2.10, whose end of support is foreseen at June 2016.
  - Joao: will move dCache forward to 2.13 in UMD4.
- Tadeusz (email): *"We are working on new release. The packages for CentOS7 were created for QCG-Computing and QCG-Notification services and both are in the final stage of our internal tests. In next weeks we are going to create packages for QCG-Broker and QCG-Client."*
- *Problematic is a lack of the APEL publisher package for CentOS7. Is there any plan to release it?"*
  - Vincenzo: will forward the question to the APEL developers.
- Discussion on Docker:
  - there is interest on Docker and there are tests on Docker around
  - DPM on Docker is under test (by CERN, not devs)
  - ARC on Docker is under test, ideally to be integrated into the building infrastructure
  - dCache makes already dCache Docker images available on Docker Hub:  
<https://hub.docker.com/search/?q=dcache&page=1&isAutomated=0&isOfficial=0&starCount=0&pullCount=0>
  - Andrea: will a Docker registry be available in EGI? Vincenzo: integrating a registry in AppDB is a possibility. At the beginning, Docker Hub can be used.

**Next meeting Jan 25, 2016 (in two weeks)**
