Monthly meeting - December 2015

Operations Portal

Cyril L'Orphelin, IN2P3

GLUE2 Browser / VAPOR

✓ Set up of a robot certificate with 2 DNs with the help of the CA

✓ Migration of data from the production instance on-going

✓ Automation of deployment

✓ Improvements on look and feel and ergonomics

We are almost ready to go into production (before February)

Some minor improvements are foreseen in January .

- Prototype : https://operations-portal.egi.eu/vapor_dev/

1) Security dashboard

✓ Notification about security issues
✓ Capture WN instead of host
✓ Metrics : we have put in place reports for the Nagios issues
✓ Take into consideration sites under certification process

2) VO ID cards

✓ New section in the VO ID Card for Portal/Web Service Robot
✓ Add filter input in vo Update

3) Dashboard

✓ Non-production alarms in ROD dashboard
✓ The template of the ticket has been improved .

This release is currently in the test phase and will be delivered at the end of the year .

✓ Migration of the whole code under gitlab

✓ Integration of the release process with gitflow

✓ Migration (when possible) from symfony 1.5 to symfony 3 :
- with a refactorisation of the code
- with the multiplication of unit tests

✓ Complete rewriting of the Downtime Notification System

A long but necessary work (November -> April)
