# New cloud profile and comparisons

- New set of critical tests for cloud RCs
- The NGIs A/R figures now take into account also the performances of cloud services
- Produced the first report for March 2016
  - [http://argo.esi.eu/lavoisier/ngi\\_fedcloudcritical\\_reports?accept=html](http://argo.esi.eu/lavoisier/ngi_fedcloudcritical_reports?accept=html)
- Only 1 issue that affected 2 cloud RCs:
  - An old version of a probe was still running, producing false failures
  - Fixed at the beginning of April

# New cloud profile and comparisons

- In the beginning of April it was also updated a cloud probe for checking properly particular configurations
- Minimal differences between the current EGI Critical profile and the new one, mainly due to the inclusions of the cloud RCs
  - The set of critical tests for cloud RCs is changed
- We'll compare the results of the profiles for the next months
  - Let us know if you notice any possible issue
- The new profile is about to be the official one in June

# Thank you for your attention.
