

How EGI is supporting EO Services

Thursday, 7 April 2016 12:20 (10 minutes)

The Earth Observation (EO) community, like all the other communities, is deeply impacted by the digital economy. In fact, for the Earth Observation, we should speak about a revolution, rather than an evolution, as the required changes generated by the digital economy represent a real paradigm shift for all EO stakeholders, both public and private.

EGI through its new EGI DataHub service is giving access to Big Data like the ones delivered by Sentinels, the European Earth Observation Satellites. As such, EGI is enabling public entities and private companies to access, manage and process EO data in a much easier way, helping them to focus on their core business and creating value in developing innovative services. Then, the European MarketPlace will support and promote these EO services.

Presenter: Dr MONDON, Emmanuel (AdviceGEO)

Session Classification: Earth Observation Data Exploitation services
