

Easy instantiation of VMs in the federated cloud through AppDB

Friday, 8 April 2016 09:35 (20 minutes)

The presentation aims at providing the concept and the status of the on-going developments for extending the EGI AppDB with VM management capabilities, in order users to have the means to instantiate and manage running instances of virtual appliances directly from the browser.

Presenter: CHATZIANGELOU, Marios (IASA)

Session Classification: Tools, services and practices to support the long-tail of science
