

EGI and Thales ESA INFOaaS Stimulus Project

Thursday, 7 April 2016 12:05 (15 minutes)

TEISS (Thales Esa InfoaaS Stimulus) is a European Space Agency (ESA) stimulus project enabling Earth Observation data to build a value chain from science to business. ESA stimulus projects are short-term, focused initiatives designed to stimulate innovative technology development.

The TEISS project aims to demonstrate that cloud resources can be accessed through the Helix Nebula Marketplace (HNX) using SlipStream for applications analysing/visualising data coming from ESA. EGI.eu is supporting developers at a commercial partner (SixSq) to define an integration solution, providing technical support with EGI cloud providers, and testing both the technical integration and the application porting of two Earth Observation use cases. Activities also comprise the definition of business models for beyond the proof of concept pilot phase.

This presentation outlines the goals of the TEISS project, current results and future activities and opportunities.

Presenter: HOLSINGER, Sy (EGI.eu)

Session Classification: Earth Observation Data Exploitation services
