

## Progress in the interest and use of GPUs in LifeWatch

*Friday, 8 April 2016 14:25 (25 minutes)*

Recent progress in image identification using GPUs makes this technique a promising solution to exploit the massive number of observations based in photographs in the environmental area.

We present our experience integrating a complete chain for assisted pattern recognition and the main technical challenges to establish a production service.

**Presenter:** AGUILAR, Fernando (CSIC)

**Session Classification:** Accelerated Computing: latest developments and use cases
