

Boris Parák is a graduate from the Faculty of Informatics, Masaryk University with a master's degree in Computer Systems, following a bachelor's degree in Computer Networks and Communication. He is currently attending the Faculty of Informatics, Masaryk University as part of a doctoral degree program Computer Systems and Technologies (ongoing) with focus on cloud management protocols and APIs.

As a researcher for CESNET, z. s. p. o. (2013 - now), he continues this work in the international environment of EGI Federated Cloud and related projects. In the current position of the leader of the Virtual Machine Management Scenario, he works closely with an international team of researchers, developers, and user communities to build an interoperable, open-standards-based, geographically distributed, and heterogeneous cloud federation for academic use.

Aside from the above-mentioned activities and responsibilities, he is a member of OGF's OCCI Working Group, an external lecturer in PA200 Cloud Computing at the Faculty of Informatics, Masaryk University, avid Linux user and system administrator, and open source software developer.
