NextGEOSS: The European GEO Data Hub

Thursday, 11 May 2017 17:15 (25 minutes)

The Group of Earth Observation embarked on the next 10 year phase with an ambition to streamline and develop the achievements in building the Global Earth Observing System of Systems (GEOSS). The European project NextGEOSS will evolve the European vision of GEOSS data exploitation for innovation and business, relying on the three main pillars; engaging communities, delivering technological developments, and advocating the use of GEOSS. All in order to support the creation and development of Earth observation based innovative research activities and commercial services.

Presenter: ALMEIDA, Nuno (DEIMOS)

Session Classification: Computing requirements for advanced data-intensive research
