

# Accounting

**Adrian Coveney**

Core Infrastructure and Collaborative Services -  
Technical Coordination Board  
2017-06-15

## Initial Areas

- Enhance current accounting for CPU, Cloud, and Storage usage
- Develop data accounting prototype to full maturity
- Explore new emerging types of accounting
- Simplify integration with external accounting repositories
- Introduce integrated views in the Portal
- Investigate usage of the accounting data for pay-for-use activities

- Increase the performance and flexibility of the summarising process
- Improve monitoring and testing to catch potential problems sooner
- Update software to take advantage of newer libraries and language features
- Increase input checking in parsers and loaders
- Improve documentation
- Optimise synchronization between Repository and Portal

## Portal Enhancements

- Backend improvements including in performance, automated testing, and extended input checking
- Improve user interface including new status pages and better graph exporting
- Improve documentation
- Support for new types of usage accounting and computing infrastructures and the metrics
- Add data analysis tools to the accounting data and representation, e.g. trends

# Thank you for your attention.
