AEGIS: AARC Engagement Group for InfrastructureS

Friday, 1 December 2017 11:20 (5 minutes)

The **AARC Engagement Group for InfrastructureS (AEGIS)** brings together research and e-Infrastructure providers who implement AAI solutions for research collaborations, based on the AARC Blueprint Architecture.

AEGIS establishes a bi-directional channel between the AARC2 project and the infrastructure providers to advise each other on the developments and production integration aspects of the AARC results.

The group will ensure that:

- the results of AARC2 are known to all research infrastructures and e-infrastructures;
- infrastructures and AARC2 team can discuss AARC2 sustainability models, implementation aspects and approaches to use-cases that may be received by AARC2;
- all key parties share the same vision and the same information about AARC2 objectives and developments in the trust and identity area even if they may be in different deployment phases.

The current membership list of AEGIS include representatives from AARC, DARIAH, EGI, ELIXIR, EUDAT, GÉANT, PRACE and XSEDE.

Topic Area

Security, trust and identity
