

From service portfolio to interoperable operational models in environmental Research Infrastructures

Friday, 1 December 2017 11:30 (10 minutes)

The data for science theme in the ENVRIPLUS project aims to provide the reusable solutions to the common challenges that research infrastructures in environmental and earth science face. In this talk, the key achievements made by the theme on reference model, ontological framework, knowledge base and the service portfolio will be presented. The presenter will also discuss the new challenges that the theme is facing and the considerations towards ENVRI EOSC.

Presenter: Dr ZHAO, Zhiming (EGL.eu)

Session Classification: Building ENVRI-as-a-Service to the EOSC
