Digital Infrastructures for Research

10. 10. 2018

Principles

- Ability to notify services about changes
- Service can have own de-provisioning implementation
 - Delete account or data, suspend resources

Use-cases

- Services with persistent data or running jobs (grid, cloud, storage)
- Services with side channel access (using ssh keys)
- Services without direct user interaction (mailing lists)
- Private data management (GDPR)
- Security incident mitigation

Thank you for your attention
