The WHO

Wednesday, 10 October 2018 11:30 (25 minutes)

This talk will touch on scholarly communication workflows and how they interplay with OS. It will present why is OS important in an institution, who OS workflows apply to and what are the realities for institutions to integrate OS into their day to day workflows. For an institution there is an additional need for understanding of the scientific output of an institution. This can only be done with open infrastructures and standards. The talk will also highlight the importance of managing the long-tail of research.

Presenter: Prof. MENDEZ, Eva (University of Madrid)

Session Classification: The Who and the How of Open Science: A user journey in Open Science through the lens of OpenAIRE
