Monitoring - The Experiment Dashboard

Thursday, 22 September 2011 14:55 (15 minutes)

The Experiment Dashboard was developed in order to address the monitoring needs of the LHC experiments. It covers data management, job processing and infrastructure monitoring and works transparently across the various middleware flavours used by the LHC VOs. This presentation will summarise the key results and recent developments in monitoring of the LHC computing activities for the High Energy Physics (HEP) Heavy User Community (HUC).
