EGI Software Vulnerability Group

Wednesday, 21 September 2011 16:00 (1h 30m)

The purpose of the EGI Software Vulnerability Group (SVG) is to eliminate existing software vulnerabilities from the EGI infrastructure and prevent the introduction of new ones. Thus reducing the likelihood of Security Incidents. This session will inform attendees of the activities of the SVG, and plans for the future. This will include a summary of the Vulnerability issue handling process, how the group interacts with various parties including software providers, and what has been learnt over the last year. It will also include a summary of the vulnerability assessment activities which have taken place and plans for the coming year. Plans for how to take the activity forward in the future will be presented and discussed.

Duration (90min sessions)

One 90 minute session

Required Facilities

Largish room (50+), in the past attendance has been quite good.
(I assume a data projector for powerpoint presentations can be assumed to be present.)

Primary author: Dr CORNWALL, Linda (STFC)

Presenters: Prof. HEYMANN, Elisa (Universitat Autònoma de Barcelona); Dr CORNWALL, Linda (STFC)
