EMI Security Directions

The EMI Security Infrastructure and strategy has been defined and deployed in the first year of the project. As the second year continues there will be additions made and strategy refinements.

This can be a 90min session devoted to the Security directions that are/will be taken in the EMI project. Contributions can include the current and Security infrastructure (Architecture).

Integration of common components inside the EMI stack, AAI services and possibilities for secured usage of EMI services through pseudo-anonymous identities and encrypted data storage.

Duration (90min sessions)

One session
