Initiative for Globus in Europe

The initiative for Globus in Europe (IGE) is a EU FP7 project to coordinate European Globus activities. The main objectives of IGE are to continuously support the European computing infrastructures, to serve as a central point of contact in Europe for Globus, to drive the Globus developments forward in accordance with the requirements of European users and to strengthen the influence of European developers in the Globus Alliance.

IGE serves as a comprehensive service provider for the European e-infrastructures regarding the development, customisation, provisioning, support, and maintenance of components of the Globus Toolkit. This involves the following activities:

- Continuous measurement of software quality
- Operation of a software repository for European Globus development
- Participation in standardisation bodies and Globus-related conferences
- Training, promotion, and documentation activities
