

Procedures and Policies

Tuesday, 14 September 2010 16:30 (20 minutes)

The importance of having procedures and best practices that are valid for all project partners can not be overemphasized. Precise definitions are needed for these to guarantee that OLAs are fulfilled, which in turn is a precondition for a high quality and stable production environment.

The heritage of the EGEE projects provide a solid platform on which we stand and from which we can create an exceptional grid infrastructure. In contrast to other Grid projects, which were oriented more towards technical experiments, the EGI focuses largely on QoS. A bold initiative for this new era.

This session will give a quick overview of the procedures, policies and best practices inherited, changes needed and the adaptations and ideas for obtaining high standards in all aspects of the infrastructure. This will include introducing the key players - and their involvement - the NGIs.

Presenter: HANSPER, Vera (CSC)

Session Classification: Grid Operations Interoperations
