

Desktop Grid Infrastructure and User Support Service for EGI/NGI User Communities

Friday, 17 September 2010 09:30 (20 minutes)

The European EDGeS project has established a distributed computing infrastructure that extends “traditional” EGEE

resources with Desktop Grid worker nodes.

The infrastructure is further developed by EDGI and maintained and made available even for non-European researchers by

the DEGISCO project. This talk describes the currently existing resources that are available for EGI/NGI user communities, and introduces all user and application support activities that aim to help these communities to utilise

Desktop Grid resources for their computation or data intensive applications.

Presenter: KISS, Tamas (University of Westminster)

Session Classification: Supporting EGI user communities with Desktop Grid resources
