

Request for revision of deliverable submission for the project "EOSC-hub (777536)".

On date 11/11/2019, the officer "Christos CHATZIMICHAIL" has requested the revision of the submission for the deliverable with title "D10.4 EOSC Hub Technical Architecture and standards roadmap v2 " and number "4" for the project "EOSC-hub (777536)".

Request for revision comment:

It would require more developer-focused documentation, with clearer guidelines and descriptions of APIs, standards, etc. The descriptions of the specifications, APIs, etc., should be improved, so that they are actually well maintained in the corresponding GitHub repositories (or alike) and can be used as reference documentation for developers.

This deliverable should be updated to include this missing information. The deliverable should be resubmitted maximum 3 months after the consortium has received this review report.
