

Processes Behind the Research Data Management Life Cycle

Monday, 2 November 2020 16:15 (15 minutes)

Without understanding the need for compatibility between research data management systems and research processes, it is not possible to design and develop efficient and user-friendly data services for researchers. In this paper we describe the research data processes behind RDM lifecycles and provide an insight into the actual implementations of these services all around the world in different research systems.
