

AiiDALab - an ecosystem for developing, executing, and sharing scientific workflows

Tuesday, 3 November 2020 10:25 (10 minutes)

In my talk, I am going to present AiiDALab, which is a web platform that enables computational scientists to package scientific workflows and computational environments and share them with their collaborators and peers for further use. I will start by motivating the creation of the service. Further, I am going to describe the interface and show a quick demonstration of how AiiDALab works. Finally, I will give some examples of how AiiDALab is used in the “real-life” research.
