EGI Check-in for the Federated Cloud

Tuesday, 19 October 2021 16:15 (15 minutes)

This session will provide an overview of the EGI Federation Registry tool that allows service providers to manage the connection of their OpenID Connect and SAML based services to Check-in, the authentication, authorisation and user management service for the EGI infrastructure. The EGI Federation Registry provides a web interface which covers the whole service lifecycle, including the initial registration, reconfiguration and deregistration of a service. Cloud resource owners can use the Federation Registry to connect their compute services to the EGI Check-in authentication and authorisation service in order to join the Federated Cloud as providers and enable research communities to access their resources.
