Towards an e-infrastructure for plant phenotyping

Tuesday, 19 October 2021 17:00 (15 minutes)

Various initiatives have helped to structure the european phenotyping landscape (EMPHASIS, EPPN) and enable researchers to use facilities, resources and services for plant phenotyping across Europe. Among these services there is a need to build a federated and interoperable e-infrastructure allowing researchers to share and analyze phenotyping data. The European Network Infrastructure (EGI) can greatly contribute to the deployment of such an e-infrastructure, as demonstrated by the EAP program.
