## Compute

### Cloud Compute

Run virtual machines on demand with complete control over computing resources

### Cloud Container Compute

Run Docker containers in a lightweight virtualised environment

### High-Throughput Compute

Execute thousands of computational tasks to analyse large datasets

### Workload Manager

Manage computing workloads in an efficient way

## Storage and Data

### Online Storage

Store, share and access your files and their metadata on a global scale

### Data Transfer

Transfer large sets of data from one place to another

### DataHub

Access key scientific datasets in a scalable way

## Security

### Check-in

Login with your own credentials

## Applications

### Applications on Demand

Share online applications for your data and compute-intensive research

### Notebooks

Create interactive documents with live code, visualisations and text

## Training

### FitSM Training

Learn how to manage IT services with a pragmatic and lightweight standard

### ISO 27001 Training

Learn how to manage and secure information assets

### Training Infrastructure

Dedicated computing and storage for training and education

**ISO 9001**

Certified Quality Management System

- Workload Manager (DIRAC)
- Applications on Demand
- Notebooks

Core federation services  
Federation fabric

- Data Transfer
- DataHub
- CVMFS

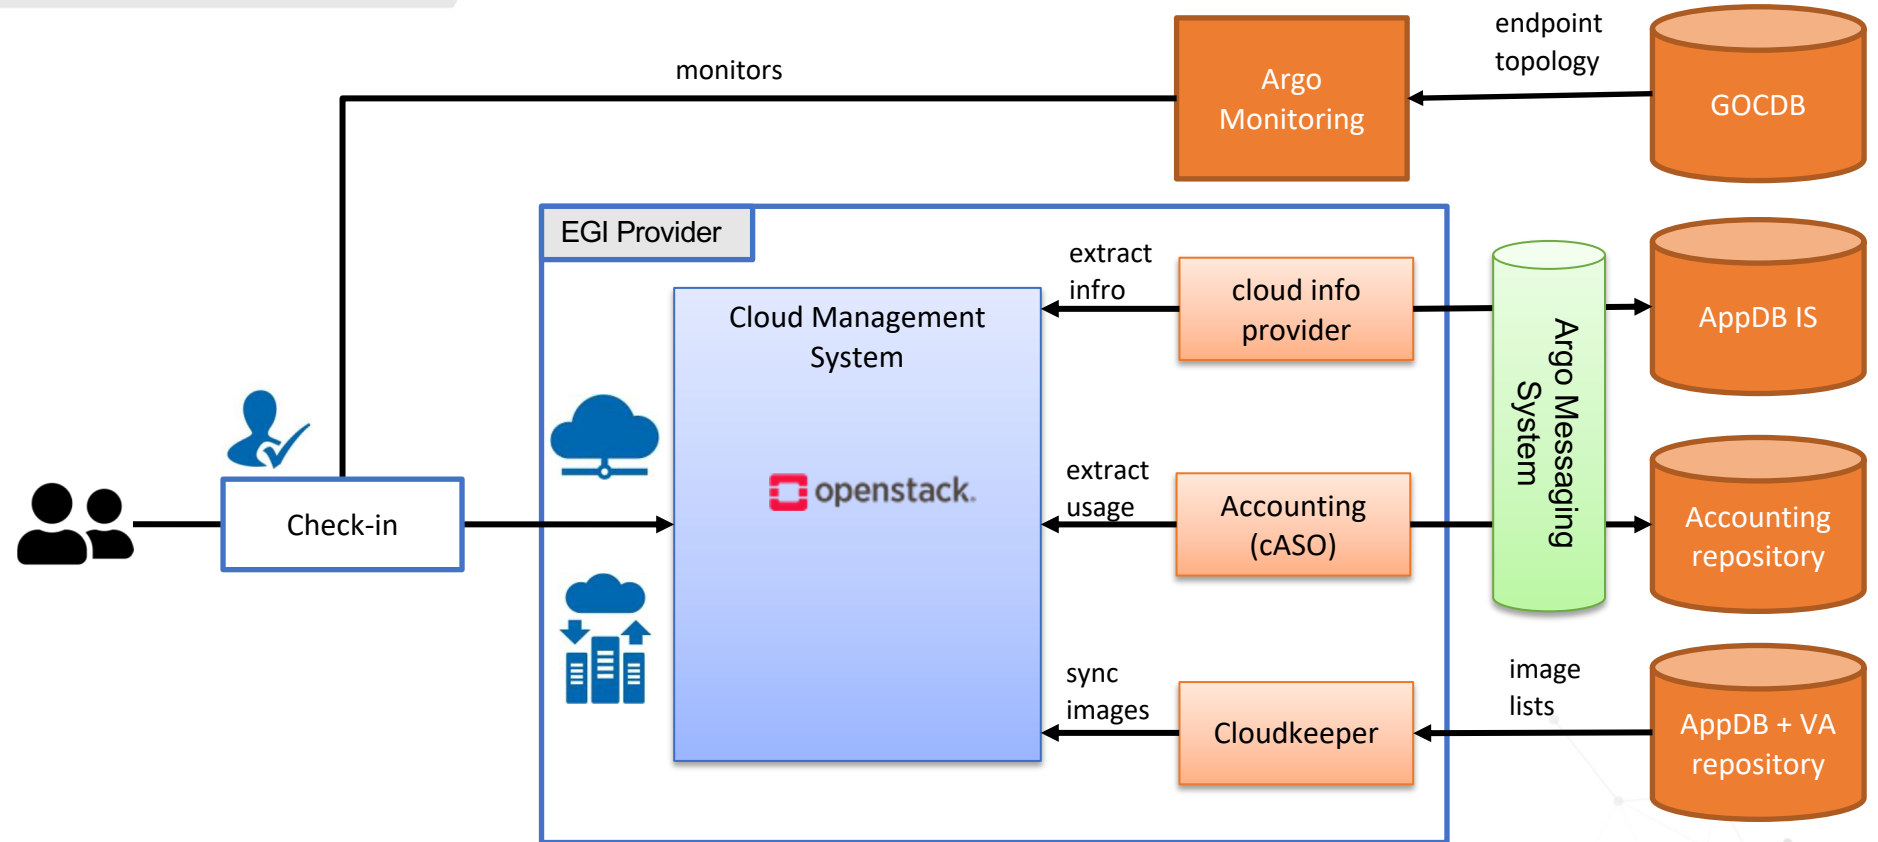

## Distributed Infrastructure as a Service (IaaS) powered by the EGI Federated Cloud

- Allows international collaborations to perform distributed data analysis with VM-based workloads

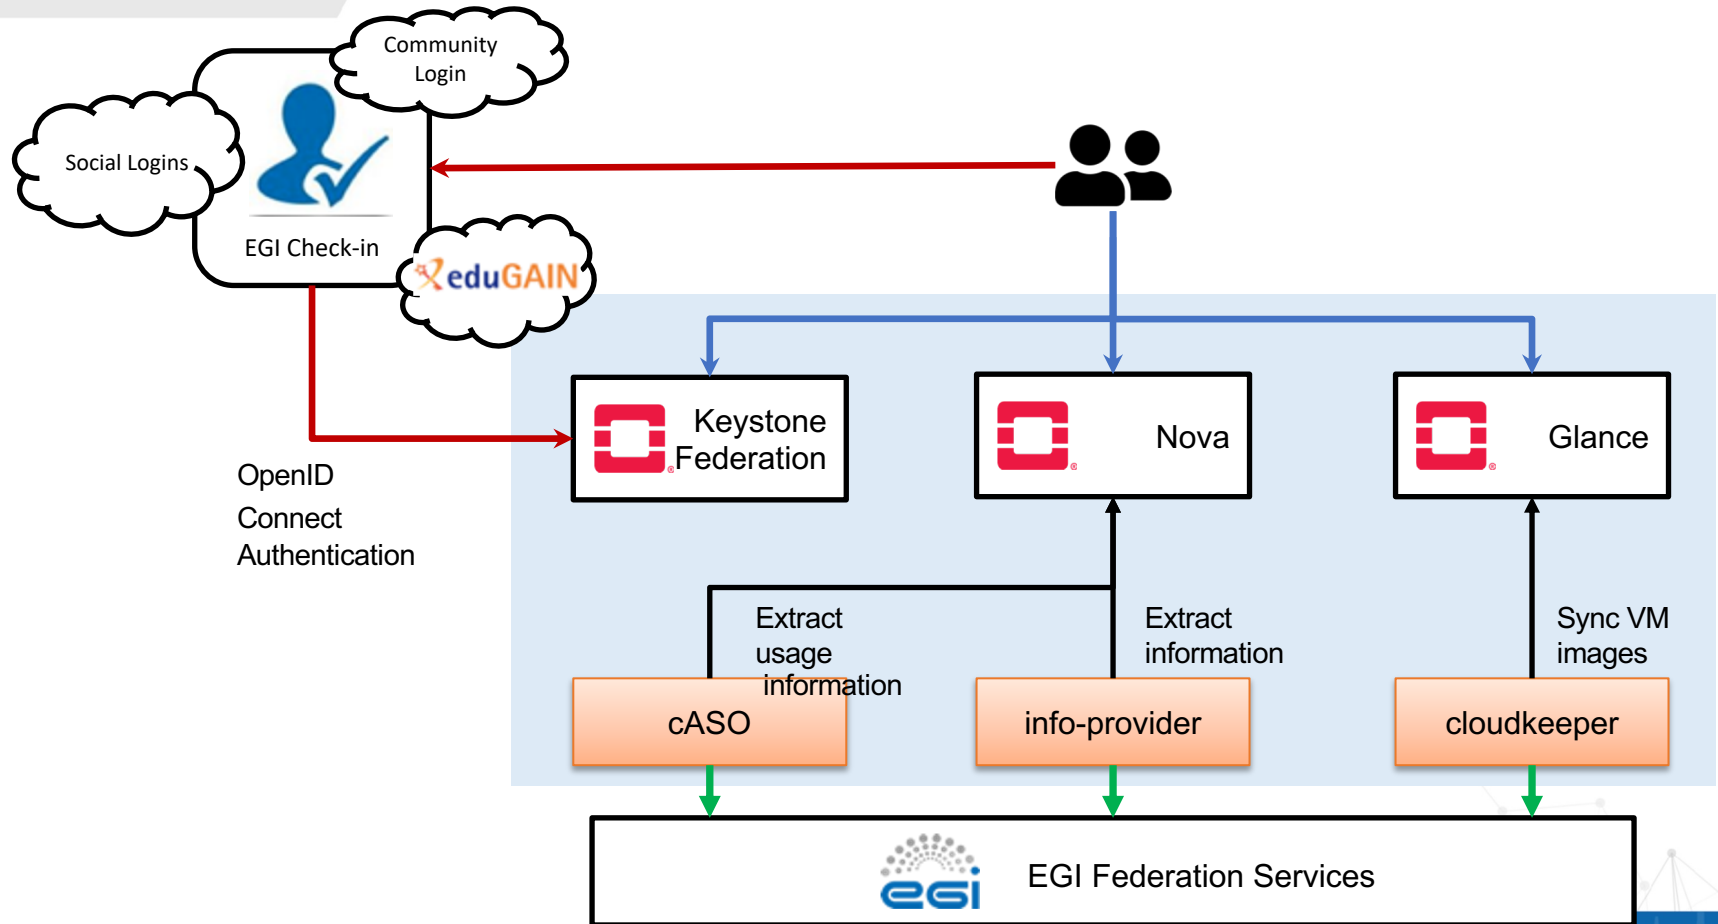

### Features:

- Execution of VMs on a distributed infrastructure
- Federated identity
- Common VM image catalogue
- GUI and CLI/API based access
- Support for IaaS orchestration
- Central accounting and monitoring

# Cloud Federation

# Interaction with OpenStack

The EGI High-Throughput compute (HTC) provides users with the capability to access large amounts of computing resources, and to submit hundreds or thousands of computational tasks.

- Provides a uniform gateway interface to existing computing & storage systems
- Access based on VOs (Virtual Organisations) using X.509 certificates
- Software distribution based on CVMFS
- DIRAC Workload Manager for distributing jobs across several sites
- FTS moves data across sites

## Compute

**Transparent data access** under a **common namespace** regardless of the location

- open access or restricted to members of a Virtual Organization (VO)

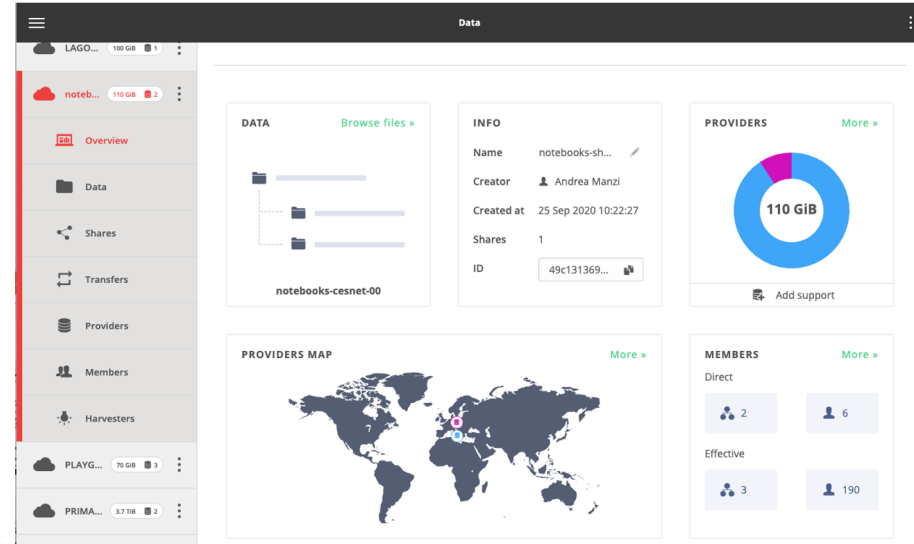

GUI & API access

**On demand/automatic replication** of data

- Resiliency and availability

Easy integration with other EGI services

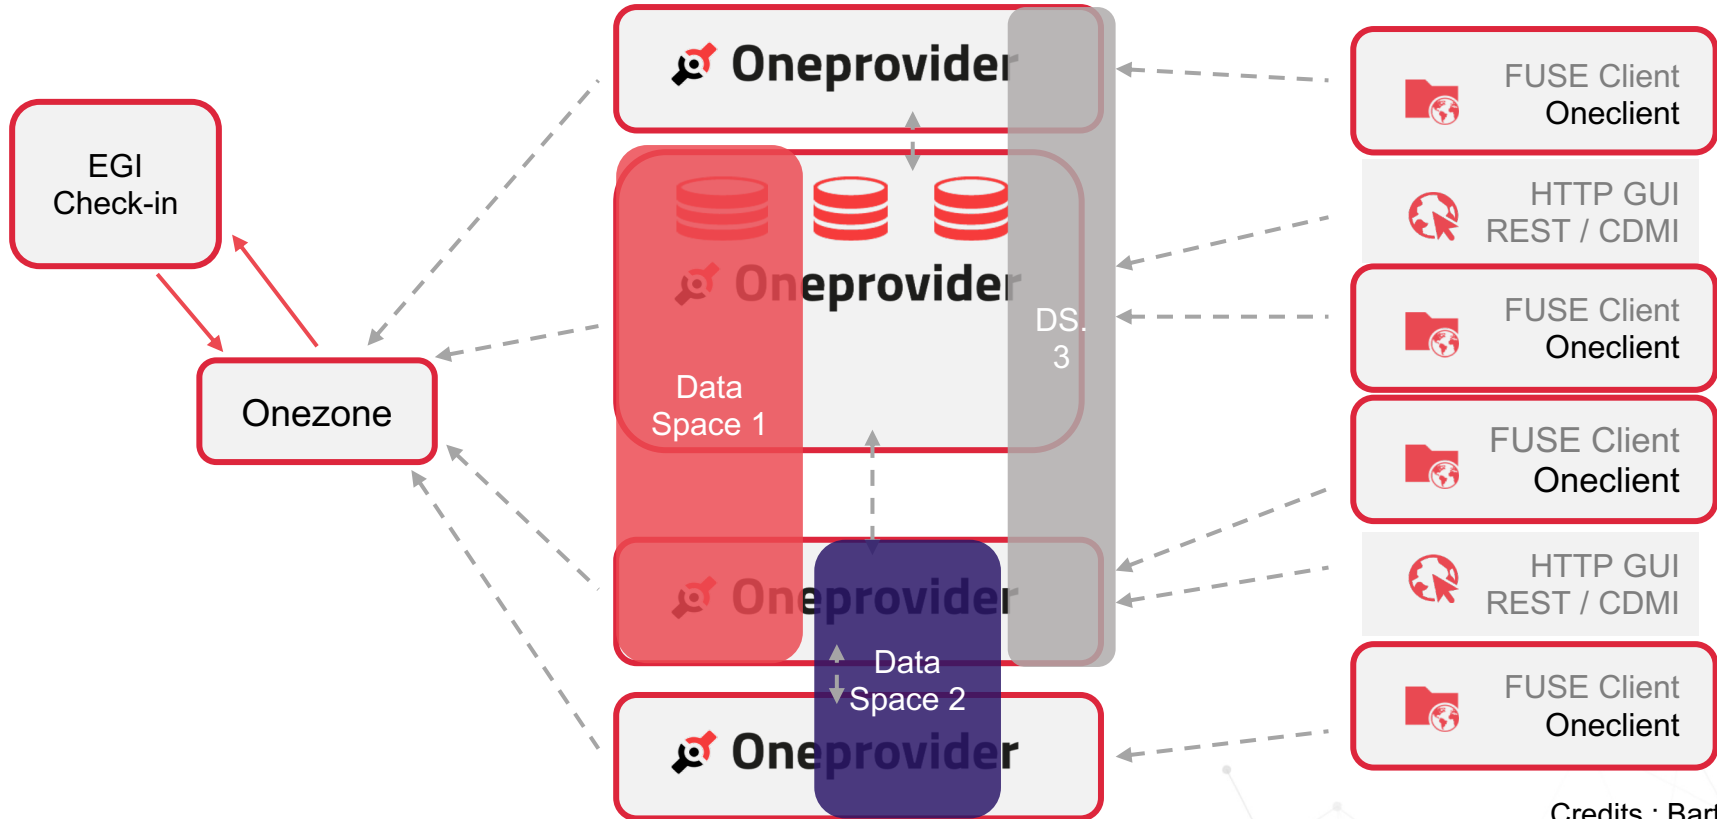

thanks to use of **EGI Check-in**

The screenshot displays the Datahub interface for a file named 'notebooks-sh...' with a size of 110 GiB and 2 shares. The interface is organized into several sections:

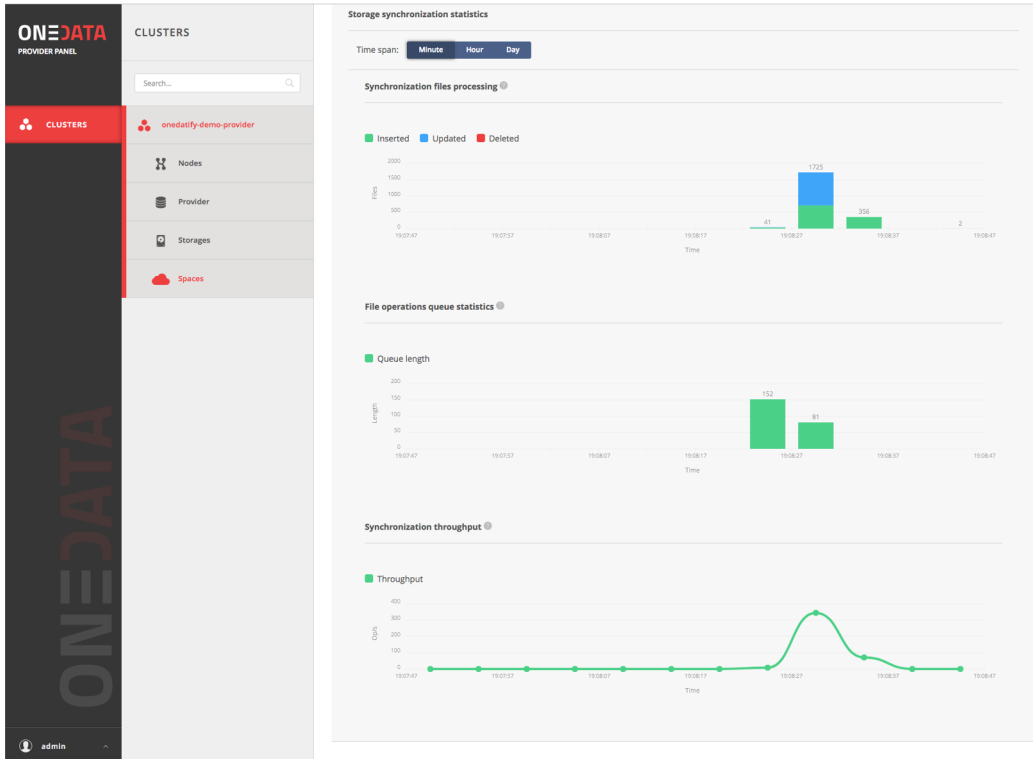

- Overview:** Shows file details including Name (notebooks-sh...), Creator (Andrea Manzi), Created at (25 Sep 2020 10:22:27), Shares (1), and ID (49c131369...).
- DATA:** A section for browsing files, showing a folder structure for 'notebooks-cesnet-00'.
- PROVIDERS:** A donut chart showing 110 GiB of data, with an 'Add support' button below it.
- PROVIDERS MAP:** A world map showing the geographical distribution of providers.
- MEMBERS:** A section showing member statistics, including Direct (2) and Effective (3) members, and a total of 6 and 190 members respectively.

# DataHub Architecture

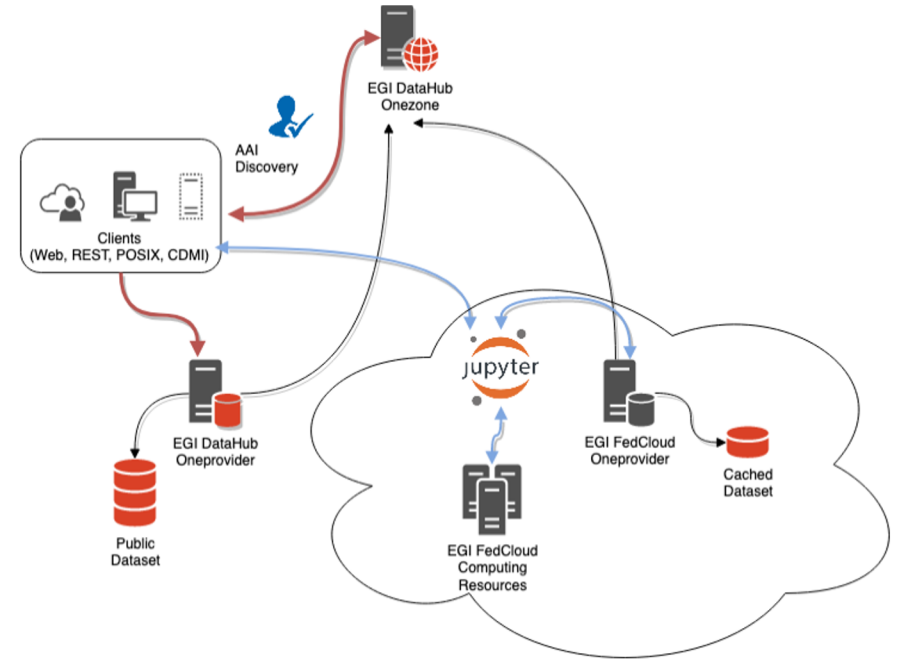

Credits : Bartosz Kryza

One time import  
Continuous Synchronization  
Statistics available from the  
Oneprovider admin panel

- EGI Notebooks deployment includes a oneprovider with support to selected spaces
- Automatic setup of credentials and oneclient to access spaces as local files from the notebooks
- Also available via OnedataFS plugin (useful for Python specific code)

**Objective:** Provide interoperability guidelines for HPC systems with the EOSC Compute Platform delivered by EGI-ACE

Explore the usage and integration of HPC guided by 4 scientific pilot use cases with combined cloud and HPC needs, focusing on the areas of:

1. Access federation: Federated Authentication and Authorization
2. Application federation: Portable execution of container-based workloads
3. Data federation: Data transfers between systems
4. Operation federation:
  - Presence in EOSC Portal, A/R monitoring, Usage accounting, Resource allocation, CRM

## 4 use case pilots:

- **ELI-NP** (IFIN-HH): deployment of HPC-capable systems on IaaS clouds (HPC as a Service)
- **HEP** (CERN): benchmarking, data transfer and execution of codes using federated authentication
- **ENES** (CMCC): execute docker-based jobs accessing to DataHub on HPC
- **PROMINENCE** (UKAEA): facilitate running containerised workflows on HPC resources from the PROMINENCE service

## 4 HPC provider pilots:

Members of EuroCC and EGI Federation

## Establish an MoU - sample tasks:

1. Coordinated delivery of cloud and user support:
  - Technical integration of cloud resources into EGI
  - Expose resources to EOSC
  - User support
2. Exchange applications and data
  - DataHub / AppDB integration and sharing
3. Impact of e-infrastructure services
  - Align and connect their customer relationship management (CRM) process

1. Create NGI: [PROC02](#)
2. Register site: [PROC09](#)
3. [Technical integration](#)
