pDNSSOC, deploying SOC capabilities in under 1 minute

Wednesday, 21 June 2023 13:00 (20 minutes)

In the Research & Education (R&E) sector, "defending as a global community"is a crucial strategy. This involves having the ability to produce and share relevant threat intelligence, and the capability to leverage it accross the entire sector.

Large campuses and research labs typically have dedicated security teams and adequate skills. But even there, deploying and operating a Security Operations Center (SOC) is a hard problem to solve.

In addition, a significant part of the R&E sector has a relatively low maturity level on threat intel, and no or limited security staff and expertise.

pDNSSOC provides a turn-key solution to both detect and respond to security incidents.
