We did it! The innovation impact of EGI-ACE

Tuesday, 20 June 2023 13:30 (2 hours)

Nowadays science requires services that empower researchers from all disciplines to collaborate in data- and compute-intensive research across borders through free-at-the-point-of-use services. EGI is an international collaboration that federates the digital capabilities, resources and expertise of hundreds of national and international research communities in Europe and worldwide. It delivers a distributed federated infrastructure that responds to the present and future needs of data-centric scientific computing in Europe, bringing together compute facilities, data, scientific applications and software as the pillars of the EOSC Compute Platform.

The demonstration of impact is a critical aspect of scientific computing, as it allows us to evaluate the effectiveness and relevance of computational tools and methods in addressing real-research problems. To showcase the impact of scientific computing on the EGI Infrastructure and EOSC Compute platform in Europe, this conference session will feature real stories from both users and service providers of computational tools and services. These stories will illustrate how scientific computing has enabled breakthroughs in their respective domains, facilitated collaborations across borders and disciplines, and empowered researchers to address some of the most pressing challenges facing society today. Through these stories, we aim to highlight the transformative potential of scientific computing and inspire further innovation and collaboration in this field. We believe that by sharing our experiences and insights, we can foster a better understanding of the value of scientific computing and its role in shaping the future of science and technology in Europe and beyond. Users and providers will have a chance to discuss and share their perspectives in the panel.
