## Shaping services for the EOSC: the experience of EOSC Future and the infraEOSC 07 projects

*Wednesday, June 21, 2023 2:00 PM (3 hours)*

Over the past two and half years, EOSC Future and five other H2020 projects, C-SCALE, DICE, EGI-ACE, OpenAIRE Nexus, and Reliance, have been working and collaborating to enrich EOSC with new services and resources from different national, regional and institutional infrastructures across Europe. As the projects are approaching their final mile, it is time to gather to reflect on the enhanced EOSC-Exchange capabilities and their benefits to scientific communities. This session is divided into two parts which are open to all but have slightly different angles. First, we will hear presentations on the services developed in these projects, which might be especially interesting for other current or potential EOSC service providers. The latter part of the session focuses on real-life use cases of these services. This panel discussion might be especially interesting for anyone interested in using EOSC services in the future.
