Data Spaces: governance consultation

Thursday, 22 June 2023 15:15 (1h 30m)

Data Spaces, as called by the European Strategy for Data, present a multi-stakeholder governance challenge.

The GREAT project is defining the governance framework underlying the Green Deal Data Space.

The definition process involves co-design with the community, validation and endorsement to ensure a successful implementation.

This session will present the Governance framework and gather feedback and suggestions for improvements from the community in an interactive way.

An example of some of the complexities surrounding the governance of data spaces includes data monetisation.

The Datamite project will present an overview of the challenges and solutions ahead in this area.
